ALLCONSULTING

ISSUES SEEN

- Version Control:
 - File MS Excel File Version 97-2003 is required
 - Online Template is configured with Version Controls in a “Hidden” worksheet
 - Must use Downloaded Template for submission or develop template to download standard
 - If you wish to develop your own programmed solution ask for an unlocked Template Version

ISSUES SEEN

- Required Data Fields: Items in Green on Template
 - Job Date
 - State
 - County
 - API Number
 - Operator Name
 - Well Name and Number
 - Longitude
 - Latitude
 - Long/Lat Projection
 - Production Type

These fields are Required and are Verified on upload to the system to make sure they have been submitted. If they are not present the upload fails.

ISSUES SEEN

- Data Entry Issues:
 - API Well Number: On Template File enter 9-10 Digit API Well Number without dashes
 - Matching API State and County to Submitted State and County Names
 - Miss Key of Water Volumes – Double check. You do not want to report that you used 200 million gallons of water when you only used 2 million

ISSUES SEEN

- Data Entry Issues (cont):
 - Location:
 - Decimal Degrees, Not Degrees-Minute-Seconds
 - When plotted location submitted does not match API State/County or Text Submitted State/County
 - Multiple Uploads of Same Disclosure (Different Submitters)
 - Duplicate API Well Numbers – Different Wells (Copy Excel File but don't edit all fields)

ISSUES SEEN

- Questions:
 - How to calculate % Mass
 - Is % Mass at time of Stream or Total Job
- Data entry may have missed ingredients in MSDS
can check vs. System Checks
- Care needs to be taken in non-liquid additives for
mass calculation
